

MongoDB Assignment

1. Set up a MongoDB database named "**Library_DB**".
2. Create a collection named "**books**" within the "**Library_DB**" database.
3. Insert at least 5 documents into the "**books**" collection, each representing a book with fields such as title, author, genre, price, and availableCopies.
4. Ensure that each document has a unique identifier.
5. Retrieve and display all documents from the "**books**" collection.
6. Find and display books whose price is between ₹300 and ₹800.
7. Find and display books belonging to a specific genre (e.g., "Fiction").
8. Update the price of a particular book.
9. Increment the availableCopies of books that are currently in stock by 2.
10. Delete a book document from the collection.
11. Delete all books that have 0 availableCopies.
12. Set up a MongoDB database named "**Hospital_DB**".
13. Create a collection named "**patients**" within the "**Hospital_DB**" database.
14. Insert at least 5 documents into the "**patients**" collection, each representing a patient with fields such as name, age, disease, doctorAssigned, and city.
15. Ensure that each patient has a unique identifier.
16. Retrieve and display all documents from the "**patients**" collection.
17. Find and display patients whose age is between 20 and 50 years old.
18. Find and display patients suffering from a specific disease (e.g., "Diabetes").
19. Update the doctorAssigned field of a patient.
20. Increment the age of patients above 60 years by 1 year.
21. Delete a patient document from the collection.
22. Delete all patients belonging to a specific city.
23. Fetch only one document from the collection using findOne().
24. Display only selected fields (e.g., show only name and email).
25. Retrieve documents sorted in ascending order.
26. Retrieve documents sorted in descending order.
27. Limit the output to the first 3 records.
28. Skip the first 2 records and display remaining records.
29. Find records where age is greater than 40.
30. Find records where price is less than ₹500.
31. Find documents using multiple conditions with \$and.
32. Find documents using \$or condition.
