Hotel Room Management System

(Node.js + Express.js + MongoDB + MVC + Session)

Objective

Develop a Hotel Room Management System using Express.js, MongoDB, Mongoose, EJS, Bootstrap, MVC Architecture, and Session Management.

Module 1: User Authentication

Registration

Create a registration form with the following fields:

- Full Name
- Email
- Password

Login

- Authenticate users using Email and Password.
- Create a session after successful login.

Logout

- Destroy the session and redirect the user to the login page.

Module 2: Room Management (CRUD Operations)

Create a Room collection with the following fields:

- Room Number
- Room Type
- Price Per Night
- Capacity

Functionalities

Insert Room

Allow logged-in users to add new room details.

Display Rooms

Display all room records in a Bootstrap table.

Update Room

Allow editing of existing room details.

Delete Room

Allow deletion of room records.

Session Requirements

The following operations should be accessible only after login:

- Insert Room
- Display Rooms
- Update Room
- Delete Room
- Logout

If a user tries to access these pages without logging in, redirect them to the Login page.

MVC Structure

models/

controllers/

routes/

views/

public/

app.js

Technologies

- Node.js
- Express.js
- MongoDB
- Mongoose
- EJS
- Bootstrap
- Express Session

Expected Output

A session-based Hotel Room Management System implementing:

✓ User Registration

✓ User Login

✓ User Logout

✓ Insert Room

✓ Display Rooms

✓ Update Room

✓ Delete Room

✓ MVC Architecture
